PROFESSIONAL SUMMARY

Technical Product Manager with 6+ years of continuous SAFe delivery across multiple Agile Release Trains, turning ambiguous enterprise problems into products that people actually adopt. I work backwards from where things break down, validate before committing, and use data to make the case for hard tradeoffs across competing priorities within and across ARTs.

KEY ACHIEVEMENTS

- Improved customer satisfaction by 25% across 10,000+ users by launching a new mobile experience end-to-end, identifying three high-drop-off workflow points through usage data analysis and redesigning those flows to reduce task friction.
- Built an experimentation framework with parallel dev, test, and UAT environments so POCs and design sprints could be validated before committing to the roadmap, cutting wasted investment and reducing features built and later discarded from 3-4 planned initiatives per quarter down to 2.
- Increased feature adoption by 25% by combining customer interviews with SQL-based behavioral analysis to identify usage patterns, and iterative UX improvements informed by post-launch data.

SKILLS

- **Product & Strategy:** Product Vision, Roadmap Prioritization, Requirements Definition, PRD Writing, Customer Discovery, Stakeholder Management.
- **Execution:** Agile Product Delivery, Sprint & Release Ownership, Product Launch Planning, Lean Product Management, SAFe.
- **Data and Analysis:** SQL (product analytics, behavioral data analysis, funnel metrics), Tableau, API Design, REST APIs, AWS (familiar).

WORK EXPERIENCE

Product Manager – ASRC FEDERAL DATA SOLUTIONS | January 2024 – July 2025 | SEATTLE, US

- Owned product strategy and roadmap within a SAFe Agile Release Train for an enterprise platform built on ReactJS and REST API architecture serving 10,000+ users, partnering with engineering to define API design and integration patterns for scalability.
- Analyzed user behavior to identify onboarding drop-offs, prioritized the highest-impact intervention points, and led a redesign that improved sustained usage and reduced support load and operational overhead.
- Built a post-launch measurement system combining usage data, support signals, and customer feedback to identify low-value features and prioritize roadmap investments, reducing wasted development effort and improving resource allocation.
- Coordinated cross-ART dependencies and PI Objectives alignment across 4 ARTs, ensuring synchronized delivery of shared platform capabilities and managing competing priorities across release trains.
- Influenced quarterly investment decisions by presenting data-backed tradeoffs across adoption, risk, and business impact to senior leadership.

Technical Product Owner – ASRC FEDERAL DATA SOLUTIONS | March 2019 – December 2023 | RESTON, US

- Functioned as de facto Product Manager within a SAFe environment across 3+ teams, owning strategy, roadmap, requirements, and PI Objectives alignment, growing from single-team ownership to cross-ART coordination across 4 ARTs before formally transitioning into the PM role.

- Reduced backlog aging by 30% and improved feature adoption by identifying recurring friction points through sprint reviews and usage data, then driving targeted roadmap updates.
- Maintained 2–3 sprint backlog runway through ongoing requirements refinement with engineering, reducing sprint planning friction and making delivery more predictable.
- Kept stakeholders aligned across time zones and org layers throughout complex multi-team deliveries, translating technical progress into updates that made sense to business audiences.
- Recognized twice as “Rockstar of the Quarter” for cross-functional leadership and consistent delivery impact.

Business Data Analyst Intern – FEDERAL HOME LOAN BANK OF CHICAGO | May 2018 – October 2018 | CHICAGO, US

- Designed automated Tableau dashboards transforming raw operational metrics into executive-ready insights, cutting report generation time by 40%.
- Established KPI tracking framework implementing two new performance metrics that improved executive reporting accuracy by 20%.

Senior Software Engineer – HSBC GLT | March 2016 – August 2017 | PUNE, INDIA

- Built AML transaction monitoring and customer identity profiling systems in a regulated environment, working closely with compliance and business stakeholders to turn verification requirements into technical specs.
- Built shared CI/CD infrastructure and drove adoption across 4 engineering teams, reaching 67% departmental adoption in 3 months by removing friction and enabling teams hands-on.

Software Engineer – TATA CONSULTANCY SERVICES LTD. | March 2012 – March 2016 | PUNE, INDIA

- Designed reusable software components that cut development time by 40% across engineering workflows.
- Represented engineering team in executive-level stakeholder communications for high-impact initiatives, influencing decisions across 2 business units.

EDUCATION

- ILLINOIS INSTITUTE OF TECHNOLOGY
Master of Information Technology & Management - Management Information Systems (MIS)
- RAJIV GANDHI PROUDYOGIKI VISHWAVIDYALAYA
Bachelor of Engineering - Electronics & Communication Engineering
